

Terraform Resource Cheatsheet (For Freshers)

1. provider "aws"

- region: AWS region to use (e.g., "us-east-1")

Clue: "Where in the world are we building resources?"

2. resource "aws_vpc"

- cidr_block: Network range (e.g., "10.0.0.0/16")
- enable_dns_hostnames: Allow EC2 to get DNS
- enable_dns_support: Allow DNS inside VPC
- tags: Naming the VPC

Clue: "My house (VPC) needs an address (CIDR), name tag, and DNS turned ON"

3. resource "aws_subnet"

- vpc_id: Attach to parent VPC
- availability_zone: e.g., "us-east-1a"
- cidr_block: Subnet block (e.g., "10.0.1.0/24")

Clue: "Subnet lives inside VPC, has a small range and zone location"

4. resource "aws_internet_gateway"

- vpc_id: Attach to VPC
- tags: Name the gateway

Clue: "IGW = Internet Door for your house (VPC)"

5. resource "aws_route_table"

- vpc_id: Link to VPC
- route block:
 - cidr_block = "0.0.0.0/0" (public)
 - gateway_id = Internet Gateway ID
- tags: Name the route table

Clue: "Routes define how traffic flows; send all (0.0.0.0/0) through IGW"

6. resource "aws_route_table_association"

- subnet_id

Terraform Resource Cheatsheet (For Freshers)

- route_table_id

Clue: "Associate the road (route) to a room (subnet)"

7. resource "aws_security_group"

- vpc_id: Belongs to a VPC
- ingress: Rules for inbound traffic
- egress: Rules for outbound traffic
- cidr_blocks: Who is allowed

Clue: "Security group = Who can enter or leave the house"

8. resource "aws_instance"

- ami: Image to launch
- instance_type: e.g., t2.micro
- subnet_id: Placement
- vpc_security_group_ids: Security
- tags: Name of instance

Clue: "EC2 = Machine inside subnet with a security lock"
